

# Sovos Global Tax Determination: Hybrid Cloud

## A Scalable Cloud Deployment Model

The benefits associated with moving to the cloud are not new concepts. Cloud platforms reduce the total cost of ownership and free up resources from multiple teams to focus on other strategic initiatives. From a sales and use tax perspective, cloud technology can increase automation and transparency for business stakeholders. However, has your organization hesitated to move to a purely Software as a Service (SaaS) model because of tax-related needs and requirements?

Enter Sovos Global Tax Determination Hybrid Cloud. This lightweight, containerized on-premise deployment model ensures customers can meet their high availability, low-latency and scalability requirements by allowing the calculation portion of the engine to be closer to the transaction source.

- ▶ **WHAT THIS MEANS:** The calculation in a cloud engine is typically performed within the Sovos cloud environment. Hybrid Cloud can take that same capability existing in the Sovos cloud and put it closer to the transaction source, eliminating any latency associated with a roundtrip call to the Sovos data center.

You can have the best of both worlds with a centralized, configured reporting structure in a SaaS environment without all of the overhead associated with on-premise.

## The Best of Both Worlds with Sovos

Sovos' Hybrid Cloud deployment option for Global Tax Determination:

### ▶ High-Availability

- If you are an organization that needs top-tier performance with zero interruption in tax calculation to keep your business running:
  - Hybrid Cloud can automatically failover to the on-premise hybrid node to eliminate any danger of interruption to calculations.

### ▶ Low-Latency

- If your tax calculation must be a small footprint to meet your company's latency requirements:
  - Hybrid Cloud allows failover to an on-premise hybrid node that gives instantaneous results. You can define how long it takes to get a result and ensure that tax is not a barrier to conducting business.

### ▶ Predictive Scaling

- If there are certain times during the year you know your organization will have huge spikes in transactions over a short period of time:
  - Hybrid Cloud can be set up to auto-scale in advance of these events, helping you prepare for a smooth process.

## With Sovos Global Tax Determination Hybrid Cloud, experience:

SaaS benefits of a single source of truth for configuration and reporting, removing the burdens related to on-premise deployment and maintenance.

Peace of mind that your systems can calculate sales tax at any moment, eliminating any downtime.

No worries associated with volume spikes causing delayed response time as the system is built to scale with your business.

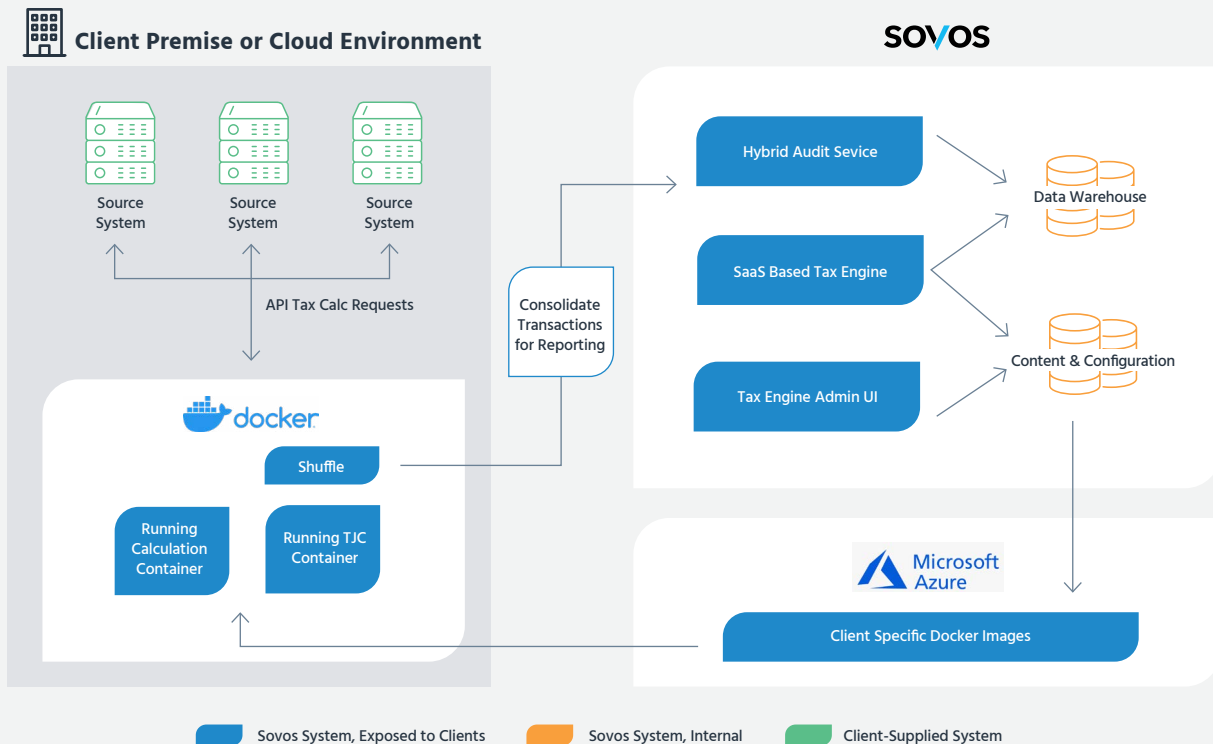

## Our Approach to Hybrid Cloud

### ► How this is delivered/deployed:

- This is containerized software that we deliver via Microsoft Azure

### ► How this is updated and maintained:

- Sovos posts to Microsoft Azure as updates are made available. Hybrid Cloud recognizes if this is new content and downloads as needed.
